

Most information and actions for the SMARTHome subsystems are available at a glance. For example, you can see the current and target temperatures of a room and lock and unlock the front door of the house from the Home screen.

However, to access more functionality, just select the background of the subsystem you would like to use. We will demonstrate selecting the Access subsystem.

## SMARTHome Help

[General](#)[Temperature](#)[Access](#)[Motion](#)[Lighting](#)[WI-FI](#)[Sound](#)

Temperature is the most common subsystem in SMARTHome. It allows you to control the temperature of your home. You can set a target temperature for each room, and the system will adjust the heating or cooling to maintain that temperature. You can also set a schedule for the temperature, so it will automatically adjust at certain times of the day.

## SMARTHome Help

[General](#)[Temperature](#)[Access](#)[Motion](#)[Lighting](#)[WI-FI](#)[Sound](#)

Access control is a critical part of any smart home system. It allows you to manage who can enter your home and when. You can set up different access levels for family members, guests, and service personnel. This ensures that only authorized individuals can enter your home, providing peace of mind and security.
